PERGAMON

VISION RESEARCH

Founded by THORNE SHIPLEY

Chairman

H. SPEKREIJSE, Netherlands Ophthalmic Research Institute and Laboratory of Medical Physics and Informatics, University of Amsterdam, P.O. Box 12011, 1100 AA Amsterdam-Zuidoost, The Netherlands [*Tel.* (31) 20 5664584; *Fax* (31) 20 6916521; *Email* borghols@amc.uva.nl]
Editorial Assistant: ELS BORGHOLS

Vision Research is a journal devoted to the functional aspects of human, vertebrate and invertebrate vision and welcomes papers that address important issues in basic and/or clinical research. The journal is sub-divided into five sections, each with two Section Editors.

Section 1: *Neurobiology*

functional morphology and anatomy
pigments and transduction
the role of neurotransmitters
retinal, subcortical and cortical electrophysiology
physiological optics
plasticity and regeneration of function

YUTAKA FUKUDA, Osaka, Japan
SAMUEL WU, Houston, Tex., U.S.A.

Section 2: *Psychophysics*

binocular, depth, motion, colour, form, pattern, orientation and texture vision
spatial vision and stereopsis
attentive vision
adaptation and aftereffects

DENNIS M. LEVI, Houston, Tex., U.S.A.
DAVIDA TELLER, Seattle, Wash., U.S.A.

Section 3: *Behavioural Physiology and Visuomotor Control*

eye movements, animal psychophysics
oculomotor studies, reading
visual guidance of manipulation, locomotion and navigation
visual behaviour in space

EILEEN KOWLER, New Brunswick, N.J., U.S.A.
CHRISTA NEUMEYER, Mainz, Germany

Section 4: *Computational Vision*

models and theory
visual networks
computer vision

ELLEN C. HILDRETH, Wellesley, Mass., U.S.A.
MICHAEL MORGAN, London, England

Section 5: *Clinical Vision Sciences*

psychophysics, electrophysiology
pathophysiology, neuropharmacology
experimental ophthalmology and neurology
functional (brain) imaging

IVAN BODIS-WOLLNER, Brooklyn, N.Y., U.S.A.
EBERHART ZRENNER, Tübingen, Germany

The Section Editors are assisted by an Editorial Board consisting of:

EMIKO ADACHI-USAMI, Chiba, Japan
EDWARD ADELSON, Cambridge, Mass., U.S.A.
RICHARD ANDERSEN, Pasadena, Calif., U.S.A.
JANETTE ATKINSON, London, England
ANDREW BLAKE, Oxford, England
COLIN BLAKEMORE, Oxford, England
JIM ENRIGHT, La Jolla, Calif., U.S.A.
MANFRED FAHLE, Tübingen, Germany
OLIVIER FAUGERAS, Valbonne, France
GERALD FISHMAN, Chicago, Ill., U.S.A.
WILSON GEISLER, Austin, Tex., U.S.A.
AMIRAM GRINVALD, Rehovot, Israel
WILLEM DE GRIP, Nijmegen, The Netherlands
ANITA HENDRICKSON, Seattle, Wash., U.S.A.
VOLKER HENN, Zürich, Switzerland
ROBERT HESS, Montréal, Canada
ABBIE HUGHES, Victoria, Australia
MICHAEL KASS, St Louis, Miss., U.S.A.
EWEN KING-SMITH, Columbus, Ohio, U.S.A.
CHRISTOF KOCH, Pasadena, Calif., U.S.A.
SIMON LAUGHLIN, Cambridge, England
GORDON LEGGE, Minneapolis, Minn., U.S.A.
JOHN MOLLON, Cambridge, England
CONCETTA MORRONE, Pisa, Italy
DAVID NEWSOME, New Orleans, La, U.S.A.
GÜNTER NIEMEYER, Zürich, Switzerland
CYNTHIA OWSLEY, Birmingham, Ala., U.S.A.
JOHN ROBSON, Cambridge, England
STEVEN SHEVELL, Chicago, Ill., U.S.A.
PAUL SIEVING, Ann Arbor, Mich., U.S.A.
MANDYAM SRINIVASAN, Canberra, Australia
DAN TS'O, Houston, Tex., U.S.A.

Publishing Office: Elsevier Science Ltd, Bampfylde Street, Exeter EX1 2AH, England [*Tel.* Exeter (01392) 51558; *Fax* (01392) 425370]. Production Editor: Amy Bond.

Subscription and Advertising Offices: Elsevier Science Ltd, The Boulevard, Langford Lane, Kidlington, Oxford OX5 1GB, England [*Tel.* Oxford (01865) 843000; *Fax* (01865) 843010]; Elsevier Science Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A.

Frequency: Published semi-monthly.

Copyright © 1995 Elsevier Science Ltd

Subscription Rates: Annual Institutional Subscription Rates 1995: North, Central and South America U.S.$1409; Rest of World £945. Associated Personal Subscription Rates are available on request for those whose institutions are library subscribers. Sterling prices exclude VAT. Non-VAT registered customers in the European Community will be charged the appropriate VAT in addition to the price listed. Prices include postage and insurance and are subject to change without notice.

Second class postage paid at NEWARK NJ and additional mailing offices. Postmaster send address corrections to *Vision Research*, Elsevier Science Inc., 660 White Plains Road, Tarrytown, NY 10591-5153, U.S.A.

Back Issues: Back issues of all previously published volumes are available direct from Elsevier Science offices (Oxford and New York). Complete volumes and single issues can be purchased for 1990–1994. Earlier issues are available in high quality photo-duplicated copies as complete volumes only.

Extrinsic current and flash sensitivity in turtle cones 34: 429
Spatial-frequency-tuned channels in early infancy: VEP evidence 34: 737
Steady state feedback in mammalian phototransduction illustrated by a nomogram 34: 821
Interactions between modulated luminance patterns and random-dot patterns 34: 2561
Adaptation with a stabilized retinal image: effect of luminance and contrast 34: 2907
On the perception of illusory contours 34: 3145

ADAPTATION, CHROMATIC
Spatial integration in human vision with bichromatically-mixed adaptation field 34: 303
Temporal integration at equiluminance and chromatic adaptation 34: 1007
Mechanisms of chromatic rod vision in scotopic illumination 34: 1019
Ultraviolet sensitivity of three cone types in the aphakic observer determined by chromatic adaptation 34: 1457
The influence of contrast adaptation on color appearance 34: 1993
Visual evoked potentials in three-dimensional color space: correlates of spatio-chromatic processing 34: 2657

ADAPTATION, DARK (*see also* BLEACHING)
Periodic cone cell twists in the walleye, *Stizostedion vitreum;* a new type of retinomotor activity 34: 11
Stereopsis and positional acuity under dark adaptation 34: 799
The effects of acetazolamide in albino rabbits, pigmented rabbits, and humans 34: 829
Dark adaptation of toad rod photoreceptors following small bleaches 34: 2787

ADAPTATION, LIGHT
Periodic cone cell twists in the walleye, *Stizostedion vitreum;* a new type of retinomotor activity 34: 11

ADAPTATION, MOTION
Movement aftereffect of bi-vectorial transparent motion 34: 349
Recovery from motion adaptation is delayed by successively presented orthogonal motion 34: 1149
Motion adaptation governs the shape of motion-evoked cortical potentials 34: 1541
Effect of contrast and adaptation on the perception of the direction and speed of drifting gratings 34: 2071
Adaptation to second-order motion results in a motion aftereffect for directionally-ambiguous test stimuli 34: 2879

ADAPTATION, SPATIAL
Spatial vision of the achromat: the tilt aftereffect 34: 2021
Eye proprioception and visual localization in humans: influence of ocular dominance and visual context 34: 2169

AFTEREFFECTS (*see also* ILLUSION; VISUAL PERSISTENCE)
Illusory, motion, and luminance-defined contours interact in the human visual system 34: 209
Movement aftereffect of bi-vectorial transparent motion 34: 349
Mechanisms of chromatic rod vision in scotopic illumination 34: 1019
Properties of the stereoscopic (cyclopean) motion aftereffect 34: 1139
Recovery from motion adaptation is delayed by successively presented orthogonal motion 34: 1149
The contribution of one-dimensional motion mechanisms to the perceived direction of drifting plaids and their aftereffects 34: 1823
Spatial vision of the achromat: the tilt aftereffect 34: 2021
Complete interocular transfer of motion aftereffect with flickering test 34: 2707
Adaptation to second-order motion results in a motion aftereffect for directionally-ambiguous test stimuli 34: 2879
A role for a low level mechanism in determining plaid coherence 34: 3189

AFTERIMAGES (*see* AFTEREFFECTS)

AGING
Light transmittance of the human cornea from 320 to 700 nm for different ages 34: 1453
Visual and circadian responses to light in aged retinally degenerate mice 34: 1799
Absorbance vs transmission spectra: species and age 34: 2503
Absorbance vs transmission spectra: species and age--a response 34: 2503
Aging of the human crystalline lens and anterior segment 34: 2945
The zones of discontinuity in the human lens: development and distribution with age 34: 2955

ALIGNMENT (*see* HYPERACUITY)

AMACRINE CELLS
Co-localization of GABA- and tyrosine hydroxylase-like immunoreactivities in amacrine cells of the rabbit retina 34: 995

AMBLYOPIA
Spatial phase discrimination in monkeys with experimental strabismus 34: 437
Pointing errors in strabismics: complex patterns of distorted visuomotor coordination 34: 689
Suprathreshold contrast sensitivity in experimentally strabismic monkeys 34: 1575
Visual loss during interocular suppression in normal and strabismic subjects 34: 2043
Amblyopic and peripheral vernier acuity: a test-pedestal approach 34: 3265
Discrimination of position and contrast in amblyopic and peripheral vision 34: 3293
Spatial scale shifts in amblyopia 34: 3315
Is the spatial deficit in strabismic amblyopia due to loss of cells or an uncalibrated disarray of cells? 34: 3397

ANTIBODIES (*see* IMMUNOCHEMISTRY)

APERTURE PROBLEM (*see* MOTION PERCEPTION (APERTURE PROBLEM))

APPARATUS (*see also* TECHNIQUES)
Full-wave and half-wave rectification in second-order motion perception 34: 2239

APPARENT MOTION (*see* MOTION PERCEPTION (APPARENT MOTION))

ATTENTION (*see also* COGNITION)
Perceiving textures: beyond filtering 34: 151
The scale bandwidth of visual search 34: 955
Visual search in continuous, naturalistic stimuli 34: 1187
Set-size effects in visual search: the effect of attention is independent of the stimulus for simple tasks 34: 1703
Differential effects of non-target stimuli on the occurrence of express saccades in man 34: 1883
To stare or to scrutinize: "grasping" the eye for better vision 34: 2039
Full-wave and half-wave rectification in second-order motion perception 34: 2239
Stimulus discriminability in visual search 34: 2453

BINOCULAR RIVALRY (*see also* SUPPRESSION)
The spatial properties of binocular suppression zone 34: 937
Visual loss during interocular suppression in normal and strabismic subjects 34: 2043
Visual suppression and its effect upon color and luminance sensitivity 34: 2997

BINOCULAR VISION
Selectivity of cyclopeab masking for the spatial frequency of binocular disparity modulation 34: 607
A simple mechanism for emmetropization without cues from accommodation or colour 34: 873
Some temporal aspects of stereoacuity 34: 913
Stereo matching precedes dichoptic masking 34: 1047
Long-range dichoptic interactions in the human visual cortex in the region corresponding to the blind spot 34: 1127
Seeing depth in colour: more than just what meets the eyes 34: 1165
Contrast as a depth cue 34: 1595
The development of visual acuity in the peripheral visual field of human infants: binocular and monocular measurements 34: 1659

Shape discrimination for rectangles defined by disparity alone, by disparity plus luminance and by disparity plus motion 34: 2277
An upper limit to the binocular combination of stimuli 34: 2599
Binocular visual direction 34: 2963
Contrast thresholds for stereoscopic depth identification with isoluminant and isochromatic stimuli 34: 2971

BIPOLAR CELLS
Immunocytochemical characterization and spatial distribution of midget bipolar cells in the macaque monkey retina 34: 561
Simulations of X and Y retinal ganglion cell behavior with a nonlinear push-pull model of spatiotemporal retinal processing 34: 1767
Miniature excitatory postsynaptic currents in bipolar cells of the tiger salamander retina 34: 2357

BLEACHING
Behavior of crayfish rhodopsin and metarhodopsin in digitonin: the 510 and 562 nm "visual pigments" are artifacts 34: 2679
Dark adaptation of toad rod photoreceptors following small bleaches 34: 2787

BRIGHTNESS PERCEPTION
Brightness matching and colour discrimination in young diabetics without retinopathy 34: 115
Illusory brightness step in the Chevreul illusion 34: 1567
Grating induction: a new explanation for stationary phantom gratings 34: 1609
The influence of illusory contours on the detection of luminance increments and decrements 34: 2469
The temporal dynamics of brightness filling-in 34: 3371

BROCA-SULZER EFFECT (*see* BRIGHTNESS PERCEPTION)

CELLS (*see* AMACRINE CELLS; CORTEX; GANGLION CELLS; HORIZONTAL CELLS)

CHANNELS
Motion discrimination in two-frame sequences with differing spatial frequency content 34: 197
Effects of background color on reaction time to stimuli varying in size and contrast: inferences about human M channels 34: 1039
The influence of contrast adaptation on color appearance 34: 1993
Interactions between modulated luminance patterns and random-dot patterns 34: 2561
Suppressive effects of peripheral flicker on foveal bichromatic mixture thresholds 34: 2991

CHROMATIC ABERRATION (*see* ABERRATION)

CHROMATIC CONTRAST (*see* COLOR CONTRAST)

CHROMATIC INDUCTION (*see* COLOR CONTRAST)

CLASSIFICATION
Probabilistic analysis of human supervised learning and classification 34: 669

CLINICAL APPLICATIONS
Ultraviolet filter compounds in human lenses: 3-hydroxykynurenine glucoside formation 34: 1369

COGNITION
Saccades to remembered target locations: an analysis of systematic and variable errors 34: 79

Systematic errors for saccades to remembered targets: evidence for a dissociation between saccade metrics and activity in the superior colliculus 34: 93
The memorability and discriminability of primitive perceptual units in infancy 34: 449

COLOR ANOMALY
Luminance noise and the rapid determination of discrimination ellipses in colour deficiency 34: 1279

COLOR APPEARANCE
Color perception within a chromatic context: the effect of short-wavelength light on color appearance 34: 359
Ultraviolet vision in birds: what is its function? 34: 1471
The influence of contrast adaptation on color appearance 34: 1993
Color contrast induction 34: 3111

COLOR BLINDNESS (*see* COLOR ANOMALY; DICHROMACY; MONOCHROMACY)

COLOR CODING
Individual differences in cone photopigments of normal trichromats measured by dual Rayleigh-type color matches 34: 367
Immunocytochemical characterization and spatial distribution of midget bipolar cells in the macaque monkey retina 34: 561
Ultraviolet as a component of flower reflections, and the colour perception of hymenoptera 34: 1489

COLOR CONSTANCY (*see* COLOR APPEARANCE)

COLOR CONTRAST
Motion of chromatic stimuli: first-order or second-order? 34: 49
The spatial tuning of chromatic mechanisms identified by simultaneous masking 34: 331
Color perception within a chromatic context: the effect of short-wavelength light on color appearance 34: 359
What direction of motion do we see if luminance by not colour contrast is reversed during displacement? Psychophysical evidence for a signed-colour input to motion detection 34: 2527
Contrast thresholds for stereoscopic depth identification with isoluminant and isochromatic stimuli 34: 2971
Color contrast induction 34: 3111

COLOR DISCRIMINATION
Brightness matching and colour discrimination in young diabetics without retinopathy 34: 115
The effects of acetazolamide in albino rabbits, pigmented rabbits, and humans 34: 829
The role of delineation and spatial frequency in the perception of the colours of the spectrum 34: 927
Ultraviolet sensitivity in the torus semicircularis of juvenile rainbow trout *(Oncorhynchus mykiss)* 34: 1407
Ultraviolet receptors and color vision: evolutionary implications and a dissonance of paradigms 34: 1479
Wavelength discrimination of the goldfish in the ultraviolet spectral range 34: 1515
Small passerines can discriminate ultraviolet surface colours 34: 1535
Systematic measurement of human neonatal color vision 34: 1691
Intrinsic contrast noise and infant visual contrast discrimination 34: 1947
Surface color naming in dichromats 34: 2137
Specialization of retinal function in the compound eyes of mantis shrimps 34: 2639
Visual evoked potentials in three-dimensional color space: correlates of spatio-chromatic processing 34: 2657

Contrast thresholds for stereoscopic depth identification with isoluminant and isochromatic stimuli 34: 2971
Visual suppression and its effect upon color and luminance sensitivity 34: 2997
Temporal properties of the red-green chromatic mechanism 34: 3127
The time-course of chromatic facilitation by luminance contours 34: 3139

COLOR MATCHING
Individual differences in cone photopigments of normal trichromats measured by dual Rayleigh-type color matches 34: 367
Serine/alanine amino acid polymorphism of the L-cone photopigment assessed by dual Rayleigh-type color matches 34: 377
The foveal color-match-area effect 34: 1605

COLOR OPPONENCY
APB alters photopic spectral sensitivity of the goldfish retina 34: 1
Spatial integration in human vision with bichromatically-mixed adaptation field 34: 303
Spectral sensitivity of dichromats: role of postreceptoral processes 34: 2983

COLOR SELECTIVITY
A role for a low level mechanism in determining plaid coherence 34: 3189

CONES
Periodic cone cell twists in the walleye, *Stizostedion vitreum;* a new type of retinomotor activity 34: 11
Individual differences in cone photopigments of normal trichromats measured by dual Rayleigh-type color matches 34: 367
Serine/alanine amino acid polymorphism of the L-cone photopigment assessed by dual Rayleigh-type color matches 34: 377
Extrinsic current and flash sensitivity in turtle cones 34: 429
Retinal eccentricity and the latency of eye saccades 34: 517
Visual pigments and the photic environment: the cottoid fish of Lake Baikal 34: 591
Mechanisms of chromatic rod vision in scotopic illumination 34: 1019
Estimation of linear detection mechanisms for stimuli of medium spatial frequency 34: 1267
The fate of ultraviolet receptors in the retina of the Atlantic salmon *(Salmo salar)* 34: 1375
Spectral characteristics of visual pigments in rainbow trout *(Oncorhynchus mykiss)* 34: 1385
Ultraviolet visual pigments in marine fishes of the family pomacentridae 34: 1393
The developmental trajectory of ultraviolet photosensitivity in rainbow trout is altered by thyroxine 34: 1397
The photopic sensitivity of the yellow field of the pigeon's retina to ultraviolet light 34: 1419
Sensitivity to ultraviolet light in the gerbil *(Meriones unguiculatus):* characteristics and mechanisms 34: 1433
Ultraviolet sensitivity of three cone types in the aphakic observer determined by chromatic adaptation 34: 1457
Regulation of eye growth in the African cichlid fish *Haplochromis burtoni* 34: 1807
Partial additivity of rod signals with M- and L-cone signals in increment detection 34: 2537
Identification of the synaptic pedicles belonging to the different spectral types of photoreceptor in the turtle retina 34: 2801
Electroretinographic analysis of ultraviolet sensitivity in juvenile and adult goldfish retinas 34: 2941

CONTOUR PERCEPTION
Illusory, motion, and luminance-defined contours interact in the human visual system 34: 209
Organization of contour from motion processing in primate visual cortex 34: 721
Long-range dichoptic interactions in the human visual cortex in the region corresponding to the blind spot 34: 1127
The influence of illusory contours on the detection of luminance increments and decrements 34: 2469
Rapid segmentation of one-dimensional noise textures across borders 34: 2689
Vernier acuity for edges defined by flicker 34: 2717
The time-course of chromatic facilitation by luminance contours 34: 3139
On the perception of illusory contours 34: 3145
A measure of closure 34: 3361

CONTRAST DISCRIMINATION
Binocular summation in orientation discrimination depends on stimulus contrast and duration 34: 19
Discrimination of changes in the second-order statistics of natural and synthetic images 34: 541
On the role of *X* and simple cells in human contrast processing 34: 659
The spatial properties of binocular suppression zone 34: 937
Eye fixations near corners: evidence for a centre of gravity calculation based on contrast, rather than luminance or curvature 34: 1625
Visual evoked potentials following abrupt contrast changes 34: 2813
Discrimination of position and contrast in amblyopic and peripheral vision 34: 3293
Is the spatial deficit in strabismic amplyopia due to loss of cells or an uncalibrated disarray of cells? 34: 3397

CONTRAST FLASH (*see* MASKING)

CONTRAST PERCEPTION
Perceived contrast as a function of adaptation duration 34: 31
The effect of stimulus contrast and interocular correlation on disparity vergence 34: 383
Perceived contrast of gratings and plaids: non-linear summation across oriented filters 34: 1061
Contrast matching of two-dimensional compound gratings 34: 1157
Contrast as a depth cue 34: 1595
Failures of lightness constancy, edge integration, and local edge enhancement 34: 2205
Global motion perception: interaction of the ON and OFF pathways 34: 2849
Spatial integration in position acuity 34: 2859
Adaptation with a stabilized retinal image: effect of luminance and contrast 34: 2907

CONTRAST SENSITIVITY
The architecture of perceptual spatial interactions 34: 73
Effect of orientation on spatiotemporal contrast sensitivity in multiple sclerosis 34: 123
Relationship between spatial integration and spatial spread of contrast energy in detection 34: 949
Dissociation of local and global processing in visual agnosia 34: 963
Modelling contrast sensitivity as a function of retinal illuminance and grating area 34: 1301
Suprathreshold contrast sensitivity in experimentally strabismic monkeys 34: 1575
Low luminance contrast sensitivity: effects of training on psychophysical and optokinetic nystagmus thresholds in man 34: 1893
Spatial scale shifts in peripheral vernier acuity 34: 2215
Spatiotemporal separability in contrast sensitivity 34: 2569

Grating and flicker sensitivity in the near and far periphery: naso-temporal asymmetries and binocular summation 34: 2841
Contrast thresholds for stereoscopic depth identification with isoluminant and isochromatic stimuli 34: 2971
Amblyopic and peripheral vernier acuity: a test-pedestal approach 34: 3265
Discrimination of position and contrast in amblyopic and peripheral vision 34: 3293
Spatial scale shifts in amblyopia 34: 3315

CORNEA
Line intensity affects perceived shape 34: 497
Light transmittance of the human cornea from 320 to 700 nm for different ages 34: 1453
The mechanism of corneal accommodation in chicks 34: 1549

CORTEX
Investigation of a patient with severely impaired direction discrimination: evidence against the intersection-of-constraints model 34: 267
Contribution of extrastriate area V4 to the surface-recorded flash VEP in the awake macaque 34: 415
Hemispheric asymmetry in the maturation of the extrastriate checkerboard onset evoked potential 34: 581
Functional postnatal development of the rat primary visual cortex and the role of visual experience: dark rearing and monocular deprivation 34: 709
Organization of contour from motion processing in primate visual cortex 34: 721
Cortical dynamics of feature binding and reset: control of visual persistence 34: 1089
Long-range dichoptic interactions in the human visual cortex in the region corresponding to the blind spot 34: 1127
Positional disparity sensitivity of neurons in the cat accessory optic system 34: 1673
Simulation of dynamic receptive fields in primary visual cortex 34: 1901
Transcranial magnetic stimulation of extrastriate cortex degrades human motion direction discrimination 34: 2115
Extensive integration field beyond the classical receptive field of cat's striate cortical neurons--classification and tuning properties 34: 2337
A model of self-motion estimation within primate extrastriate visual cortex 34: 2917

CORTICAL MAGNIFICATION
Illusory perception of gratings stimulating a small number of neurones 34: 3253

CRAIK-O'BRIEN EFFECT (*see* CONTOUR PERCEPTION)

CURVATURE
Eye fixations near corners: evidence for a centre of gravity calculation based on contrast, rather than luminance or curvature 34: 1625
Integration of shading and texture cues: testing the linear model 34: 1863
Influence of surface attitude and curvature scaling on discrimination of binocularly presented curved surfaces 34: 2409
Independent encoding of surface orientation and surface curvature 34: 3005

DEPTH PERCEPTION
Monocular discrimination of the direction of motion in depth 34: 163
Some temporal aspects of stereoacuity 34: 913
Seeing depth in colour: more than just what meets the eyes 34: 1165
Disparity averaging across spatial scales 34: 1315
Resistance to positional noise scales with target size 34: 1327
Contrast as a depth cue 34: 1595
Integration of shading and texture cues: testing the linear model 34: 1863
Humans combine the optic flow with static depth cues for robust perception of heading 34: 2153

Integration of stereopsis and motion shape cues 34: 2259
Shape discrimination for rectangles defined by disparity alone, by disparity plus luminance and by disparity plus motion 34: 2277
Analysis of stereothresholds for stimuli below 2.5c/deg 34: 2317
A model of self-motion estimation within primate extrastriate visual cortex 34: 2917

DETECTION THRESHOLD
Separable red-green and luminance detectors for small flashes 34: 751
Efficient and unbiased modifications of the QUEST threshold method: theory, simulations, experimental evaluation and practical implementation 34: 885
Estimation of linear detection mechanisms for stimuli of medium spatial frequency 34: 1267

DEUTERANOPIA (*see* DICHROMACY)

DEVELOPMENT
Periodic cone cell twists in the walleye, *Stizostedion vitreum;* a new type of retinomotor activity 34: 11
The memorability and discriminability of primitive perceptual units in infancy 34: 449
The Cardiff acuity test used for measuring visual acuity development in toddlers 34: 555
Hemispheric asymmetry in the maturation of the extrastriate checkerboard onset evoked potential 34: 581
Scotopic center surround organization in 10-week-old infants 34: 621
Functional postnatal development of the rat primary visual cortex and the role of visual experience: dark rearing and monocular deprivation 34: 709
Spatial-frequency-tuned channels in early infancy: VEP evidence 34: 737
Coherence thresholds for discrimination of motion direction in infants 34: 877
The development of visual acuity in the peripheral visual field of human infants: binocular and monocular measurements 34: 1659
Systematic measurement of human neonatal color vision 34: 1691
Regulation of eye growth in the African cichlid fish *Haplochromis burtoni* 34: 1807
Intrinsic contrast noise and infant visual contrast discrimination 34: 1947
Growth and optical development of the ocular lens of the squid *(Sepioteuthis lessoniana)* 34: 2177
The development of motion sensitivity during the first year of life 34: 2387
Electroretinographic analysis of ultraviolet sensitivity in juvenile and adult goldfish retinas 34: 2941

DICHROMACY
Luminance noise and the rapid determination of discrimination ellipses in colour deficiency 34: 1279
Surface color naming in dichromats 34: 2137
Visual evoked potentials in three-dimensional color space: correlates of spatio-chromatic processing 34: 2657
Spectral sensitivity of dichromats: role of postreceptoral processes 34: 2983

DIPLOPIA (*see* BINOCULAR VISION)

DIRECTIONAL SENSITIVITY (MOTION) (*see* MOTION PERCEPTION (DIRECTIONAL SENSITIVITY))

DISPARITY (*see* BINOCULAR VISION; STEREOPSIS)

ECCENTRICITY (*see* PERIPHERAL VISION)

EDGE DETECTION (*see* FEATURE DETECTION)

ELECTRORETINOGRAM
The effects of acetazolamide in albino rabbits, pigmented rabbits, and humans 34: 829
Effect of kainic acid and NMDA on the pattern electroretinogram, the scotopic threshold response, the oscillatory potentials and the electroretinogram in the urethane anaesthetized cat 34: 1111
The photopic sensitivity of the yellow field of the pigeon's retina to ultraviolet light 34: 1419
Sensitivity to ultraviolet light in the gerbil *(Meriones unguiculatus):* characteristics and mechanisms 34: 1433
Visual and circadian responses to light in aged retinally degenerate mice 34: 1799
Spatial frequency tuning of the monkey pattern ERG depends on D2 receptor-linked action of dopamine 34: 2051
Electrophysiological signs of retinal dopamine deficiency in recently diagnosed Parkinson's disease and a follow up study 34: 2629
The *c*-wave of the electroretinogram possesses a third component from the proximal retina 34: 2673
Electroretinographic analysis of ultraviolet sensitivity in juvenile and adult goldfish retinas 34: 2941

EVOKED POTENTIALS
Contribution of extrastriate area V4 to the surface-recorded flash VEP in the awake macaque 34: 415
Hemispheric asymmetry in the maturation of the extrastriate checkerboard onset evoked potential 34: 581
Organization of contour from motion processing in primate visual cortex 34: 721
Spatial-frequency-tuned channels in early infancy: VEP evidence 34: 737
Human brain responses to different image contrasts 34: 849
Spatial-frequency specific contrast gain and flicker masking of human transient VEP 34: 863
Motion adaptation governs the shape of motion-evoked cortical potentials 34: 1541
Intrinsic contrast noise and infant visual contrast discrimination 34: 1947
The development of motion sensitivity during the first year of life 34: 2387
Electrophysiological signs of retinal dopamine deficiency in recently diagnosed Parkinson's disease and a follow up study 34: 2629
Visual evoked potentials in three-dimensional color space: correlates of spatio-chromatic processing 34: 2657
Visual evoked potentials following abrupt contrast changes 34: 2813
Short-term changes in the response characteristics of the human visual evoked potential 34: 2823

EYE MOVEMENTS
The difference between the perception of absolute and relative motion: a reaction time study 34: 191
Magnocellular or parvocellular lesions in the lateral geniculate nucleus of monkeys cause minor deficits of smooth pursuit eye movements 34: 223

Eye torsion elicited by oscillating gratings: effects of orientation, wavelength and stationary contours 34: 533
Instability of ocular torsion during fixation: cyclovergence is more stable than cycloversion 34: 1077
Differences in eye movements and reading problems in dyslexic and normal children 34: 1345
Low vision reading with sequential word presentation 34: 1723
Eye torsion associated with disparity-induced vertical vergence in humans 34: 2307
Changes in ocular alignment and pointing accuracy after sustained passive rotation of one eye 34: 2613
Motion capture of luminance stimuli by equiluminous color gratings and by attentive tracking 34: 2701
A model of self-motion estimation within primate extrastriate visual cortex 34: 2917
The influence of gravity on Donders' law for head movements 34: 3017

EYE MOVEMENTS, OPTOKINETIC NYSTAGMUS
Low luminance contrast sensitivity: effects of training on psychophysical and optokinetic nystagmus thresholds in man 34: 1893
Vergence compensation during binocularly- and monocularly-evoked horizontal optokinetic nystagmus in the pigmented rat 34: 3335

EYE MOVEMENTS, SACCADIC
Saccades to remembered target locations: an analysis of systematic and variable errors 34: 79
Systematic errors for saccades to remembered targets: evidence for a dissociation between saccade metrics and activity in the superior colliculus 34: 93
Retinal eccentricity and the latency of eye saccades 34: 517
Low vision reading with sequential word presentation 34: 1723
Reading unspaced text: implications for theories of reading eye movements 34: 1735
Vertical saccadic velocity and force development in superior oblique palsy 34: 1785
Differential effects of non-target stimuli on the occurrence of express saccades in man 34: 1883
Express saccades elicited during visual scan in the monkey 34: 2023
The effects of visual scene composition on the latency of saccadic eye movements of the rhesus monkey 34: 2293
Changes in ocular alignment and pointing accuracy after sustained passive rotation of one eye 34: 2613

EYE MOVEMENTS, SMOOTH PURSUIT
Magnocellular or parvocellular lesions in the lateral geniculate nucleus of monkeys cause minor deficits of smooth pursuit eye movements 34: 223
Smooth pursuit eye movements with imaginary targets defined by extrafoveal cues 34: 803
Effect of stimulus position and velocity upon the maintenance of smooth pursuit eye velocity 34: 2477
The relationship of anticipatory smooth eye movement to smooth pursuit initiation 34: 3027
Estimating heading during eye movements 34: 3197

EYE MOVEMENTS, TORSIONAL
Eye torsion elicited by oscillating gratings: effects of orientation, wavelength and stationary contours 34: 533
Instability of ocular torsion during fixation: cyclovergence is more stable than cycloversion 34: 1077
Eye torsion associated with disparity-induced vertical vergence in humans 34: 2307

EYE MOVEMENTS, VERGENCE
Mechanisms of vertical phoria adaptation revealed by time-course and two-dimensional spatiotopic maps 34: 241
The effect of stimulus contrast and interocular correlation on disparity vergence 34: 383
Disparity vergence eye movements exhibit preprogrammed motor control 34: 1335
Eye torsion associated with disparity-induced vertical vergence in humans 34: 2307

EYE MOVEMENTS, VESTIBULO-OCULAR
Effect of stimulus position and velocity upon the maintenance of smooth pursuit eye velocity 34: 2477
A model of self-motion estimation within primate extrastriate visual cortex 34: 2917

FEATURE DETECTION
Active vision in honeybees: task-oriented suppression of an innate behaviour 34: 511
Illusory brightness step in the Chevreul illusion 34: 1567
Failures of lightness constancy, edge integration, and local edge enhancement 34: 2205
Vernier acuity for edges defined by flicker 34: 2717

FIXATION
Instability of ocular torsion during fixation: cyclovergence is more stable than cycloversion 34: 1077
Dark vergence in relation to fixation disparity at different luminance and blur levels 34: 1197
Differences in eye movements and reading problems in dyslexic and normal children 34: 1345
Eye fixations near corners: evidence for a centre of gravity calculation based on contrast, rather than luminance or curvature 34: 1625
Differential effects of non-target stimuli on the occurrence of express saccades in man 34: 1883

FLICKER
Detection and direction discrimination performance with flicker gratings in peripheral vision 34: 763
Spatial-frequency specific contrast gain and flicker masking of human transient VEP 34: 863
Effects of luminance and external temporal noise on flicker sensitivity as a function of stimulus size at various eccentricities 34: 1981
Complete interocular transfer of motion aftereffect with flickering test 34: 2707
Vernier acuity for edges defined by flicker 34: 2717
Grating and flicker sensitivity in the near and far periphery: naso-temporal asymmetries and binocular summation 34: 2841
Suppressive effects of peripheral flicker on foveal bichromatic mixture thresholds 34: 2991

FORM PERCEPTION
Human brain responses to different image contrasts 34: 849
Dissociation of local and global processing in visual agnosia 34: 963
A theory of shape constancy based on perspective invariants 34: 1637
Integration of shading and texture cues: testing the linear model 34: 1863
Perceived surface shape not features determines correspondence strength in apparent motion 34: 2125
Integration of stereopsis and motion shape cues 34: 2259
Shape discrimination for rectangles defined by disparity alone, by disparity plus luminance and by disparity plus motion 34: 2277
The visual perception of three-dimensional shape from self-motion and object-motion 34: 2331

Recognition and detection of texture-defined letters 34: 2403
Influence of surface attitude and curvature scaling on discrimination of binocularly presented curved surfaces 34: 2409
Independent encoding of surface orientation and surface curvature 34: 3005
Canonical views in object representation and recognition 34: 3037
A measure of closure 34: 3361

FOVEA
The foveal color-match-area effect 34: 1605
Two simple psychophysical methods for determining the optical modulation transfer function of the human eye 34: 2493
Suppressive effects of peripheral flicker on foveal bichromatic mixture thresholds 34: 2991

GAIN CONTROL
Movement aftereffect of bi-vectorial transparent motion 34: 349
A two-process analysis of pattern masking 34: 645

GANGLION CELLS
The response of macaque ganglion cells and human observers to heterochromatically modulated lights: the effect of stimulus size 34: 217
Ganglion cell pathways for rod vision 34: 477
Simulations of X and Y retinal ganglion cell behavior with a nonlinear push-pull model of spatiotemporal retinal processing 34: 1767
Centrifugal inputs enhance responses of retinal ganglion cells in the Japanese quail without changing their spatial coding properties 34: 2189
Responses to pulses and sinusoids in macaque ganglion cells 34: 3081

GRATINGS
Velocity discrimination in chromatic gratings and beats 34: 41
Eye torsion elicited by oscillating gratings: effects of orientation, wavelength and stationary contours 34: 533
Disappearance of stationary visual phantoms under high luminant or equiluminant inducing gratings 34: 1001
Perceived contrast of gratings and plaids: non-linear summation across oriented filters 34: 1061
Contrast matching of two-dimensional compound gratings 34: 1157
Modelling contrast sensitivity as a function of retinal illuminance and grating area 34: 1301
Grating induction: a new explanation for stationary phantom gratings 34: 1609
Spatiotemporal separability in contrast sensitivity 34: 2569
Grating and flicker sensitivity in the near and far periphery: naso-temporal asymmetries and binocular summation 34: 2841
Illusory perception of gratings stimulating a small number of neurones 34: 3253

GROUPING
A measure of closure 34: 3361

HISTOCHEMISTRY (*see* NEUROCHEMISTRY)

HORIZONTAL CELLS
Subcellular localization of $GABA_A$ receptor on bipolar cells in macaque and human retina 34: 1235

HYPERACUITY
Spatio-temporal interpolation in depth 34: 343
Line intensity affects perceived shape 34: 497

Motion displacement thresholds for compound stimuli predicted by the displacement of centroids 34: 747
Stereopsis and positional acuity under dark adaptation 34: 799
Resistance to positional noise scales with target size 34: 1327
Spatial scale shifts in peripheral vernier acuity 34: 2215
Changes in ocular alignment and pointing accuracy after sustained passive rotation of one eye 34: 2613
Rapid segmentation of one-dimensional noise textures across borders 34: 2689
Vernier acuity for edges defined by flicker 34: 2717
Spatial integration in position acuity 34: 2859
Binocular visual direction 34: 2963
Amblyopic and peripheral vernier acuity: a test-pedestal approach 34: 3265
Discrimination of position and contrast in amblyopic and peripheral vision 34: 3293
Spatial scale shifts in amblyopia 34: 3315

ILLUSION (*see also* AFTEREFFECTS)
Illusory, motion, and luminance-defined contours interact in the human visual system 34: 209
Seeing depth in colour: more than just what meets the eyes 34: 1165
Illusory brightness step in the Chevreul illusion 34: 1567
Eye proprioception and visual localization in humans: influence of ocular dominance and visual context 34: 2169
The influence of illusory contours on the detection of luminance increments and decrements 34: 2469
On the perception of illusory contours 34: 3145
Illusory perception of gratings stimulating a small number of neurones 34: 3253

ILLUSORY CONTOURS (*see* ILLUSION)

IMAGE QUALITY
Discrimination of changes in the second-order statistics of natural and synthetic images 34: 541
Relationship between spatial integration and spatial spread of contrast energy in detection 34: 949
Dark vergence in relation to fixation disparity at different luminance and blur levels 34: 1197
Inconsistencies in models of the human ocular modulation transfer function 34: 1247
Discrepancies in high frequency optical modulation transfer of the human eye, reply to Drasdo, Thompson and Charman (1994) 34: 1251
Two simple psychophysical methods for determining the optical modulation transfer function of the human eye 34: 2493

IMMUNOCHEMISTRY
Immunocytochemical characterization and spatial distribution of midget bipolar cells in the macaque monkey retina 34: 561
Immunohistochemical study of human retinal astroglia 34: 1935

INCREMENT THRESHOLD
Failures of lightness constancy, edge integration, and local edge enhancement 34: 2205
Localization of element clusters by the human visual system 34: 2439
The influence of illusory contours on the detection of luminance increments and decrements 34: 2469
Partial additivity of rod signals with M- and L-cone signals in increment detection 34: 2537
Visual suppression and its effect upon color and luminance sensitivity 34: 2997

INTEROCULAR TRANSFER (*see* AFTEREFFECTS)

ISOLUMINANCE (*see* COLOR CONTRAST)

LATENCY (*see* REACTION TIME)

LATERAL GENICULATE NUCLEUS
Magnocellular or parvocellular lesions in the lateral geniculate nucleus of monkeys cause minor deficits of smooth pursuit eye movements 34: 223
Long-range dichoptic interactions in the human visual cortex in the region corresponding to the blind spot 34: 1127

LATERAL INHIBITION
Do peripheral non-informative cues induce early facilitation of target detection? 34: 179

LEARNING
Probabilistic analysis of human supervised learning and classification 34: 669

LENS
Effects of optically induced blur on the refractive status of young monkeys 34: 293
Lens accommodation evoked by microstimulation of the superior colliculus in the cat 34: 975
Ultraviolet filter compounds in human lenses: 3-hydroxykynurenine glucoside formation 34: 1369
Ultraviolet sensitivity of three cone types in the aphakic observer determined by chromatic adaptation 34: 1457
Ultraviolet regulation of neuroendocrine and circadian physiology in rodents 34: 1521
Refractive index distribution and spherical aberration in the crystalline lens of the African cichlid fish *Haplochromis burtoni* 34: 1815
Refractive index of decapsulated bovine lens surfaces measured with a reflectometric sensor 34: 1927
Growth and optical development of the ocular lens of the squid *(Sepioteuthis lessoniana)* 34: 2177
Absorbance vs transmission spectra: species and age 34: 2503
Absorbance vs transmission spectra: species and age--a response 34: 2503
In vivo determination of the biomechanical properties of the component elements of the accommodation mechanism 34: 2897
Electroretinographic analysis of ultraviolet sensitivity in juvenile and adult goldfish retinas 34: 2941
Aging of the human crystalline lens and anterior segment 34: 2945
The zones of discontinuity in the human lens: development and distribution with age 34: 2955

LOW VISION
The spatial tuning of chromatic mechanisms identified by simultaneous masking 34: 331
Separable red-green and luminance detectors for small flashes 34: 751
Low vision reading with sequential word presentation 34: 1723

LUMINANCE
Motion of chromatic stimuli: first-order or second-order? 34: 49
Disappearance of stationary visual phantoms under high luminant or equiluminant inducing gratings 34: 1001
Temporal integration at equiluminance and chromatic adaptation 34: 1007
Effect of kainic acid and NMDA on the pattern electroretinogram, the scotopic threshold response, the oscillatory potentials and the electroretinogram in the urethane anaesthetized cat 34: 1111

Dark vergence in relation to fixation disparity at different luminance and blur levels 34: 1197
Eye fixations near corners: evidence for a centre of gravity calculation based on contrast, rather than luminance or curvature 34: 1625
Effects of luminance and external temporal noise on flicker sensitivity as a function of stimulus size at various eccentricities 34: 1981
The influence of contrast adaptation on color appearance 34: 1993
Speed, spatial-frequency, and temporal-frequency comparisons in luminance and colour gratings 34: 2093
Psychophysical evidence of differential latencies of colour inputs to motion perception 34: 2519
What direction of motion do we see if luminance by not colour contrast is reversed during displacement? Psychophysical evidence for a signed-colour input to motion detection 34: 2527
Motion capture of luminance stimuli by equiluminous color gratings and by attentive tracking 34: 2701
Adaptation with a stabilized retinal image: effect of luminance and contrast 34: 2907
Visual suppression and its effect upon color and luminance sensitivity 34: 2997
The time-course of chromatic facilitation by luminance contours 34: 3139

MACH BANDS (*see* CONTOUR PERCEPTION)

MACULAR PIGMENT
Visual field deficits in early age-related macular degeneration 34: 409

MASKING
The architecture of perceptual spatial interactions 34: 73
The spatial tuning of chromatic mechanisms identified by simultaneous masking 34: 331
Selectivity of cyclopean masking for the spatial frequency of binocular disparity modulation 34: 607
A two-process analysis of pattern masking 34: 645
On the role of X and simple cells in human contrast processing 34: 659
Spatial-frequency specific contrast gain and flicker masking of human transient VEP 34: 863
Effects of background color on reaction time to stimuli varying in size and contrast: inferences about human M channels 34: 1039
Stereo matching precedes dichoptic masking 34: 1047
Dyslexic children learn a new visual strategy for reading: a controlled experiment 34: 1223
Timing of visual events for motion discrimination 34: 1585
Spatial scale shifts in peripheral vernier acuity 34: 2215
Spatiotemporal separability in contrast sensitivity 34: 2569
Temporal beats in the human visual system 34: 2833
Spatial scale shifts in amblyopia 34: 3315
The temporal dynamics of brightness filling-in 34: 3371

McCOLLOUGH EFFECT (*see* AFTEREFFECTS)

MEMORY (*see* COGNITION)

METACONTRAST (*see* MASKING)

MONOCHROMACY
Spatial vision of the achromat: the tilt aftereffect 34: 2021

MONOCULAR VISION
Contrast as a depth cue 34: 1595

The development of visual acuity in the peripheral visual field of human infants: binocular and monocular measurements 34: 1659
Linear and non-linear filtering in stereopsis 34: 2431
Hemifield relative motion bias in adults monocularly enucleated at an early age 34: 3389

MORPHOLOGY (*see* NEUROANATOMY)

MOTION PERCEPTION
Visual discrimination between a curved and straight path of self motion: effects of forward speed 34: 107
Motion discrimination in two-frame sequences with differing spatial frequency content 34: 197
Temporal integration of random dot apparent motion information in human central vision 34: 461
Binocular mechanisms for detecting motion-in-depth 34: 483
Organization of contour from motion processing in primate visual cortex 34: 721
Changes in the perceived direction of drifting plaids, induced by asymmetrical changes in the spatio-temporal structure of the underlying components 34: 775
Directional anisotropy of motion sensitivity across the visual field 34: 1029
Properties of the stereoscopic (cyclopean) motion aftereffect 34: 1139
Interaction between primary and secondary mechanisms in human motion perception 34: 1255
Orientation discrimination of motion-defined gratings 34: 1331
Timing of visual events for motion discrimination 34: 1585
The contribution of one-dimensional motion mechanisms to the perceived direction of drifting plaids and their aftereffects 34: 1823
Perceived motion in the vector sum direction 34: 1835
Spatial scale dependent in-phase and anti-phase directional biases in the perception of self-organized motion patterns 34: 1843
Effect of contrast and adaptation on the perception of the direction and speed of drifting gratings 34: 2071
Full-wave and half-wave rectification in second-order motion perception 34: 2239
Integration of stereopsis and motion shape cues 34: 2259
The visual perception of three-dimensional shape from self-motion and object-motion 34: 2331
Is global motion really based on spatial integration of local motion signals? 34: 2425
What direction of motion do we see if luminance by not colour contrast is reversed during displacement? Psychophysical evidence for a signed-colour input to motion detection 34: 2527
On the role of second-order signals in the perceived direction of motion of Type II plaid patterns 34: 2609
Evidence for separate motion-detecting mechanisms for first- and second-order motion in human vision 34: 2727
Global motion perception: interaction of the ON and OFF pathways 34: 2849
Computational analysis of non-Fourier motion 34: 3057
An analysis of the temporal integration mechanism in human motion perception 34: 3153
A role for a low level mechanism in determining plaid coherence 34: 3189
Hemifield relative motion bias in adults monocularly enucleated at an early age 34: 3389

MOTION PERCEPTION (APERTURE PROBLEM)
The analysis of motion of two-dimensional patterns: do Fourier components provide the first stage? 34: 59

MOTION PERCEPTION (APPARENT MOTION)
Spatio-temporal interpolation in depth 34: 343

Simultaneity in the Ternus configuration: psychophysical data and a computer model 34: 397
Detection and direction discrimination performance with flicker gratings in peripheral vision 34: 763
Effect of the ISI on the visible persistence of a stimulus in apparent motion 34: 2103
Perceived surface shape not features determines correspondence strength in apparent motion 34: 2125
Psychophysical evidence of differential latencies of colour inputs to motion perception 34: 2519
Perception of apparent motion between dissimilar gratings: spatio-temporal properties 34: 2741
An analysis of the temporal integration mechanism in human motion perception 34: 3153
Spatial summation and its interaction with the temporal integration mechanism in human motion perception 34: 3171
An energy model of interframe interval effects in single-step apparent motion 34: 3223
A reduction in the number of directionally selective neurons extends the spatial limit for global motion perception 34: 3241
Polarity matching in the Ternus configuration 34: 3347

MOTION PERCEPTION (DIRECTIONAL SENSITIVITY)
The analysis of motion of two-dimensional patterns: do Fourier components provide the first stage? 34: 59
Monocular discrimination of the direction of motion in depth 34: 163
Investigation of a patient with severely impaired direction discrimination: evidence against the intersection-of-constraints model 34: 267
Detection and direction discrimination performance with flicker gratings in peripheral vision 34: 763
Changes in the perceived direction of drifting plaids, induced by asymmetrical changes in the spatio-temporal structure of the underlying components 34: 775
Coherence thresholds for discrimination of motion direction in infants 34: 877
Directional anisotropy of motion sensitivity across the visual field 34: 1029
Spatial scale dependent in-phase and anti-phase directional biases in the perception of self-organized motion patterns 34: 1843
Effect of contrast and adaptation on the perception of the direction and speed of drifting gratings 34: 2071
Transcranial magnetic stimulation of extrastriate cortex degrades human motion direction discrimination 34: 2115
The development of motion sensitivity during the first year of life 34: 2387
An energy model of interframe interval effects in single-step apparent motion 34: 3223
A reduction in the number of directionally selective neurons extends the spatial limit for global motion perception 34: 3241

MOTION PERCEPTION (OPTIC FLOW)
Monocular discrimination of the direction of motion in depth 34: 163
Humans combine the optic flow with static depth cues for robust perception of heading 34: 2153
Temporal summation of visual motion 34: 2547
A model of self-motion estimation within primate extrastriate visual cortex 34: 2917
Estimating heading during eye movements 34: 3197
Analysis of misperceived observer motion during simulated eye rotations 34: 3215

MOTION PERCEPTION (SPEED SENSITIVITY)
Velocity discrimination in chromatic gratings and beats 34: 41
Motion of chromatic stimuli: first-order or second-order? 34: 49
The difference between the perception of absolute and relative motion: a reaction time study 34: 191

Antagonistic comparison of temporal frequency filter outputs as a basis for speed perception 34: 253
Vertical saccadic velocity and force development in superior oblique palsy 34: 1785
Effect of contrast and adaptation on the perception of the direction and speed of drifting gratings 34: 2071
Speed, spatial-frequency, and temporal-frequency comparisons in luminance and colour gratings 34: 2093
Effect of the ISI on the visible persistence of a stimulus in apparent motion 34: 2103
The development of motion sensitivity during the first year of life 34: 2387

MYOPIA
6-Hydroxy dopamine does not affect lens-induced refractive errors but suppresses deprivation myopia 34: 143
Regulation of eye growth in the African cichlid fish *Haplochromis burtoni* 34: 1807

NATURAL IMAGES
Motion displacement thresholds for compound stimuli predicted by the displacement of centroids 34: 747
Visual search in continuous, naturalistic stimuli 34: 1187
The relation between celestial colour gradients and the position of the sun, with regard to the sun compass 34: 1461

NEURAL NETS
Simulations of X and Y retinal ganglion cell behavior with a nonlinear push-pull model of spatiotemporal retinal processing 34: 1767
Simulation of dynamic receptive fields in primary visual cortex 34: 1901
The temporal dynamics of brightness filling-in 34: 3371

NEUROANATOMY
The response of macaque ganglion cells and human observers to heterochromatically modulated lights: the effect of stimulus size 34: 217
On the role of *X* and simple cells in human contrast processing 34: 659
Cortical dynamics of feature binding and reset: control of visual persistence 34: 1089
The fate of ultraviolet receptors in the retina of the Atlantic salmon *(Salmo salar)* 34: 1375
The mechanism of corneal accommodation in chicks 34: 1549
Positional disparity sensitivity of neurons in the cat accessory optic system 34: 1673

NEUROCHEMISTRY
APB alters photopic spectral sensitivity of the goldfish retina 34: 1
Growth of rabbit pigmented and nonpigmented ciliary body epithelium 34: 137
6-Hydroxy dopamine does not affect lens-induced refractive errors but suppresses deprivation myopia 34: 143
Steady state feedback in mammalian phototransduction illustrated by a nomogram 34: 821
The effects of acetazolamide in albino rabbits, pigmented rabbits, and humans 34: 829
Co-localization of GABA- and tyrosine hydroxylase-like immunoreactivities in amacrine cells of the rabbit retina 34: 995
Cytosolic calcium transient increase through the AMPA/kainate receptor in cultured Müller cells 34: 1105
Effect of kainic acid and NMDA on the pattern electroretinogram, the scotopic threshold response, the oscillatory potentials and the electroretinogram in the urethane anaesthetized cat 34: 1111
Subcellular localization of $GABA_A$ receptor on bipolar cells in macaque and human retina 34: 1235

Ultraviolet filter compounds in human lenses: 3-hydroxykynurenine glucoside formation 34: 1369
Ultraviolet visual pigments in marine fishes of the family pomacentridae 34: 1393
A third, ultraviolet-sensitive, visual pigment in the Tokay gecko *(Gekko gekko)* 34: 1427
Ultraviolet regulation of neuroendocrine and circadian physiology in rodents 34: 1521
Immunohistochemical study of human retinal astroglia 34: 1935
Spatial frequency tuning of the monkey pattern ERG depends on D2 receptor-linked action of dopamine 34: 2051
Miniature excitatory postsynaptic currents in bipolar cells of the tiger salamander retina 34: 2357
Sequence divergence, polymorphism and evolution of the middle-wave and long-wave visual pigment genes of Great Apes and Old World monkeys 34: 2483
Electrophysiological signs of retinal dopamine deficiency in recently diagnosed Parkinson's disease and a follow up study 34: 2629
The *c*-wave of the electroretinogram possesses a third component from the proximal retina 34: 2673
Phylogenetic relationships among vertebrate visual pigments 34: 3097

NEUROTRANSMITTER (*see* NEUROCHEMISTRY)

NOISE
Relationship between spatial integration and spatial spread of contrast energy in detection 34: 949
Modelling contrast sensitivity as a function of retinal illuminance and grating area 34: 1301
Intrinsic contrast noise and infant visual contrast discrimination 34: 1947
Effects of luminance and external temporal noise on flicker sensitivity as a function of stimulus size at various eccentricities 34: 1981
Evidence for separate, task dependent noise processes in orientation and size perception 34: 2059
Humans combine the optic flow with static depth cues for robust perception of heading 34: 2153
Two simple psychophysical methods for determining the optical modulation transfer function of the human eye 34: 2493
Rapid segmentation of one-dimensional noise textures across borders 34: 2689
Dark adaptation of toad rod photoreceptors following small bleaches 34: 2787

OCCLUSION
Orientation discrimination of motion-defined gratings 34: 1331
Interocularly unpaired zones escape local binocular matching 34: 1875
Occlusion, transparency, and stereopsis: a new explanation for stereo capture 34: 2891
Binocular visual direction 34: 2963

OCULAR DIMENSIONS
Effects of optically induced blur on the refractive status of young monkeys 34: 293

OCULAR MEDIA
Ultraviolet vision in a passeriform bird: from receptor spectral sensitivity to overall spectral sensitivity in *Leiothrix lutea* 34: 1415

OPTIC FLOW (*see* MOTION PERCEPTION (OPTIC FLOW))

OPTIC TECTUM
Systematic errors for saccades to remembered targets: evidence for a dissociation between saccade metrics and activity in the superior colliculus 34: 93
Lens accommodation evoked by microstimulation of the superior colliculus in the cat 34: 975

Express saccades elicited during visual scan in the monkey 34: 2023

ORIENTATION PERCEPTION
Binocular summation in orientation discrimination depends on stimulus contrast and duration 34: 19
The architecture of perceptual spatial interactions 34: 73
Effect of orientation on spatiotemporal contrast sensitivity in multiple sclerosis 34: 123
Investigation of a patient with severely impaired direction discrimination: evidence against the intersection-of-constraints model 34: 267
The influence of a stationary single line in darkness on the visual perception of eye level 34: 311
Line intensity affects perceived shape 34: 497
Orientation discrimination of motion-defined gratings 34: 1331
Spatial vision of the achromat: the tilt aftereffect 34: 2021
Evidence for separate, task dependent noise processes in orientation and size perception 34: 2059
Orientation dependent misalignments in a visual alignment task 34: 2195
Spatial scale shifts in peripheral vernier acuity 34: 2215
Spatial summation among coextensive and parallel line segments across wide separations (50°): egocentric localization and the Great Circle Model 34: 2577
Perception of apparent motion between dissimilar gratings: spatio-temporal properties 34: 2741
Asymmetries in preattentive line detection 34: 3103
Spatial scale shifts in amblyopia 34: 3315

PATHOLOGY
Brightness matching and colour discrimination in young diabetics without retinopathy 34: 115
Visual field deficits in early age-related macular degeneration 34: 409
Light transmittance of the human cornea from 320 to 700 nm for different ages 34: 1453
Ultraviolet sensitivity of three cone types in the aphakic observer determined by chromatic adaptation 34: 1457
Vertical saccadic velocity and force development in superior oblique palsy 34: 1785
An investigation of some sensory and refractive visual factors in dyslexia 34: 1913
Electrophysiological signs of retinal dopamine deficiency in recently diagnosed Parkinson's disease and a follow up study 34: 2629

PERIPHERAL VISION
Perceived contrast as a function of adaptation duration 34: 31
The coding of spatial position by the human visual system: effects of spatial scale and retinal eccentricity 34: 625
Pointing errors in strabismics: complex patterns of distorted visuomotor coordination 34: 689
Detection and direction discrimination performance with flicker gratings in peripheral vision 34: 763
Directional anisotropy of motion sensitivity across the visual field 34: 1029
Dyslexic children learn a new visual strategy for reading: a controlled experiment 34: 1223
The development of visual acuity in the peripheral visual field of human infants: binocular and monocular measurements 34: 1659
Spatial scale shifts in peripheral vernier acuity 34: 2215
Grating and flicker sensitivity in the near and far periphery: naso-temporal asymmetries and binocular summation 34: 2841
Suppressive effects of peripheral flicker on foveal bichromatic mixture thresholds 34: 2991
Illusory perception of gratings stimulating a small number of neurones 34: 3253

PERSISTENCE (*see* VISUAL PERSISTENCE)

PHASE SENSITIVITY
Visual evoked potentials following abrupt contrast changes 34: 2813
Short-term changes in the response characteristics of the human visual evoked potential 34: 2823

PHOTOCHEMISTRY
Changes in the light-sensitive current of salamander rods upon manipulation of putative pH-regulating mechanisms in the inner and outer segment 34: 983

PHOTOPIC VISION
Disappearance of stationary visual phantoms under high luminant or equiluminant inducing gratings 34: 1001
Ultraviolet vision in a passeriform bird: from receptor spectral sensitivity to overall spectral sensitivity in *Leiothrix lutea* 34: 1415
Effects of luminance and external temporal noise on flicker sensitivity as a function of stimulus size at various eccentricities 34: 1981

PHOTOPIGMENTS
The intrarhabdomal filters in the retinas of mantis shrimps 34: 279
Individual differences in cone photopigments of normal trichromats measured by dual Rayleigh-type color matches 34: 367
Serine/alanine amino acid polymorphism of the L-cone photopigment assessed by dual Rayleigh-type color matches 34: 377
Visual pigments and the photic environment: the cottoid fish of Lake Baikal 34: 591
Response univariance in bull-frog rods with two visual pigments 34: 839
Luminance noise and the rapid determination of discrimination ellipses in colour deficiency 34: 1279
An analysis of two spectral properties of vertebrate visual pigments 34: 1359
Spectral characteristics of visual pigments in rainbow trout *(Oncorhynchus mykiss)* 34: 1385
Ultraviolet visual pigments in marine fishes of the family pomacentridae 34: 1393
The photopic sensitivity of the yellow field of the pigeon's retina to ultraviolet light 34: 1419
A third, ultraviolet-sensitive, visual pigment in the Tokay gecko *(Gekko gekko)* 34: 1427
Sensitivity to ultraviolet light in the gerbil *(Meriones unguiculatus)*: characteristics and mechanisms 34: 1433
Ultraviolet receptors and color vision: evolutionary implications and a dissonance of paradigms 34: 1479
The foveal color-match-area effect 34: 1605
Sequence divergence, polymorphism and evolution of the middle-wave and long-wave visual pigment genes of Great Apes and Old World monkeys 34: 2483
Absorbance vs transmission spectra: species and age 34: 2503
Absorbance vs transmission spectra: species and age--a response 34: 2503
Behavior of crayfish rhodopsin and metarhodopsin in digitonin: the 510 and 562 nm "visual pigments" are artifacts 34: 2679
Phylogenetic relationships among vertebrate visual pigments 34: 3097

PHOTORECEPTORS (*see also* CONES; RODS)
Periodic cone cell twists in the walleye, *Stizostedion vitreum;* a new type of retinomotor activity 34: 11
The intrarhabdomal filters in the retinas of mantis shrimps 34: 279
Ultraviolet vision in a passeriform bird: from receptor spectral sensitivity to overall spectral sensitivity in *Leiothrix lutea* 34: 1415
Ultraviolet photoreception in mantis shrimp 34: 1443

Ultraviolet receptors and color vision: evolutionary implications and a dissonance of paradigms 34: 1479
Simulations of X and Y retinal ganglion cell behavior with a nonlinear push-pull model of spatiotemporal retinal processing 34: 1767
Visual and circadian responses to light in aged retinally degenerate mice 34: 1799
Miniature excitatory postsynaptic currents in bipolar cells of the tiger salamander retina 34: 2357
Specialization of retinal function in the compound eyes of mantis shrimps 34: 2639
Dark adaptation of toad rod photoreceptors following small bleaches 34: 2787
Identification of the synaptic pedicles belonging to the different spectral types of photoreceptor in the turtle retina 34: 2801

π MECHANISMS
Partial additivity of rod signals with M- and L-cone signals in increment detection 34: 2537

PIGMENT EPITHELIUM
Growth of rabbit pigmented and nonpigmented ciliary body epithelium 34: 137

POLARIZED LIGHT
Ultraviolet sensitivity in the torus semicircularis of juvenile rainbow trout *(Oncorhynchus mykiss)* 34: 1407
Ultraviolet photoreception in mantis shrimp 34: 1443

PROTANOPIA (*see* DICHROMACY)

PUPILS
The analysis of motion of two-dimensional patterns: do Fourier components provide the first stage? 34: 59
Inconsistencies in models of the human ocular modulation transfer function 34: 1247
Discrepancies in high frequency optical modulation transfer of the human eye, reply to Drasdo, Thompson and Charman (1994) 34: 1251

REACTION TIME
Do peripheral non-informative cues induce early facilitation of target detection? 34: 179
The difference between the perception of absolute and relative motion: a reaction time study 34: 191
Retinal eccentricity and the latency of eye saccades 34: 517
Effects of background color on reaction time to stimuli varying in size and contrast: inferences about human M channels 34: 1039
Timing of visual events for motion discrimination 34: 1585
Differential effects of non-target stimuli on the occurrence of express saccades in man 34: 1883
The effects of visual scene composition on the latency of saccadic eye movements of the rhesus monkey 34: 2293

READING
Dissociation of local and global processing in visual agnosia 34: 963
Dyslexic children learn a new visual strategy for reading: a controlled experiment 34: 1223
Differences in eye movements and reading problems in dyslexic and normal children 34: 1345
Low vision reading with sequential word presentation 34: 1723
Reading unspaced text: implications for theories of reading eye movements 34: 1735
Refractive index distribution and spherical aberration in the crystalline lens of the African cichlid fish *Haplochromis burtoni* 34: 1815
An investigation of some sensory and refractive visual factors in dyslexia 34: 1913

To stare or to scrutinize: "grasping" the eye for better vision 34: 2039
Recognition and detection of texture-defined letters 34: 2403

RECEPTIVE FIELDS (*see also individual cell types)*
Simulation of dynamic receptive fields in primary visual cortex 34: 1901
Centrifugal inputs enhance responses of retinal ganglion cells in the Japanese quail without changing their spatial coding properties 34: 2189
Extensive integration field beyond the classical receptive field of cat's striate cortical neurons--classification and tuning properties 34: 2337

RECEPTOR POTENTIAL (*see* CONES; ELECTRORETINOGRAM; PHOTORECEPTORS; RODS)

REFRACTION
6-Hydroxy dopamine does not affect lens-induced refractive errors but suppresses deprivation myopia 34: 143
Effects of optically induced blur on the refractive status of young monkeys 34: 293
A simple mechanism for emmetropization without cues from accommodation or colour 34: 873
Refractive index of decapsulated bovine lens surfaces measured with a reflectometric sensor 34: 1927

RETINA
APB alters photopic spectral sensitivity of the goldfish retina 34: 1
The intrarhabdomal filters in the retinas of mantis shrimps 34: 279
Extrinsic current and flash sensitivity in turtle cones 34: 429
Immunocytochemical characterization and spatial distribution of midget bipolar cells in the macaque monkey retina 34: 561
Visual pigments and the photic environment: the cottoid fish of Lake Baikal 34: 591
Response univariance in bull-frog rods with two visual pigments 34: 839
Cc-localization of GABA- and tyrosine hydroxylase-like immunoreactivities in amacrine cells of the rabbit retina 34: 995
Cytosolic calcium transient increase through the AMPA/kainate receptor in cultured Müller cells 34: 1105
Subcellular localization of $GABA_A$ receptor on bipolar cells in macaque and human retina 34: 1235
The developmental trajectory of ultraviolet photosensitivity in rainbow trout is altered by thyroxine 34: 1397
Immunohistochemical study of human retinal astroglia 34: 1935
Centrifugal inputs enhance responses of retinal ganglion cells in the Japanese quail without changing their spatial coding properties 34: 2189
Miniature excitatory postsynaptic currents in bipolar cells of the tiger salamander retina 34: 2357
Electrophysiological signs of retinal dopamine deficiency in recently diagnosed Parkinson's disease and a follow up study 34: 2629
Specialization of retinal function in the compound eyes of mantis shrimps 34: 2639
The *c*-wave of the electroretinogram possesses a third component from the proximal retina 34: 2673
Identification of the synaptic pedicles belonging to the different spectral types of photoreceptor in the turtle retina 34: 2801

RETINAL DISEASE (*see* PATHOLOGY)

ROD-CONE INTERACTION (*see* CONES; RODS)

RODS
Periodic cone cell twists in the walleye, *Stizostedion vitreum;* a new type of retinomotor activity 34: 11
Ganglion cell pathways for rod vision 34: 477
Retinal eccentricity and the latency of eye saccades 34: 517
Visual pigments and the photic environment: the cottoid fish of Lake Baikal 34: 591
Response univariance in bull-frog rods with two visual pigments 34: 839
Changes in the light-sensitive current of salamander rods upon manipulation of putative pH-regulating mechanisms in the inner and outer segment 34: 983
Mechanisms of chromatic rod vision in scotopic illumination 34: 1019
Spectral characteristics of visual pigments in rainbow trout *(Oncorhynchus mykiss)* 34: 1385
The developmental trajectory of ultraviolet photosensitivity in rainbow trout is altered by thyroxine 34: 1397
A third, ultraviolet-sensitive, visual pigment in the Tokay gecko *(Gekko gekko)* 34: 1427
Regulation of eye growth in the African cichlid fish *Haplochromis burtoni* 34: 1807
Surface color naming in dichromats 34: 2137
Partial additivity of rod signals with M- and L-cone signals in increment detection 34: 2537
Behavior of crayfish rhodopsin and metarhodopsin in digitonin: the 510 and 562 nm "visual pigments" are artifacts 34: 2679
Dark adaptation of toad rod photoreceptors following small bleaches 34: 2787

SACCADES (*see* EYE MOVEMENTS, SACCADIC)

SACCADIC SUPPRESSION (*see* SUPPRESSION)

SATURATION
Binocular summation in orientation discrimination depends on stimulus contrast and duration 34: 19
Temporal integration at equiluminance and chromatic adaptation 34: 1007

SCHEMATIC EYE (*see* OCULAR DIMENSIONS)

SCOTOPIC VISION
Ganglion cell pathways for rod vision 34: 477
Scotopic center surround organization in 10-week-old infants 34: 621
Disappearance of stationary visual phantoms under high luminant or equiluminant inducing gratings 34: 1001

SEGMENTATION (*see also* FORM PERCEPTION)
Rapid segmentation of one-dimensional noise textures across borders 34: 2689
On the perception of illusory contours 34: 3145

SHORT-WAVELENGTH-SENSITIVITY PATHWAY
Color perception within a chromatic context: the effect of short-wavelength light on color appearance 34: 359
The relation between celestial colour gradients and the position of the sun, with regard to the sun compass 34: 1461

SIZE PERCEPTION
Monocular discrimination of the direction of motion in depth 34: 163
Contrast as a depth cue 34: 1595

Evidence for separate, task dependent noise processes in orientation and size perception 34: 2059

SPATIAL FREQUENCY (*see also* PHASE SENSITIVITY)
Perceived contrast as a function of adaptation duration 34: 31
Effect of orientation on spatiotemporal contrast sensitivity in multiple sclerosis 34: 123
Motion discrimination in two-frame sequences with differing spatial frequency content 34: 197
Spatio-temporal interpolation in depth 34: 343
Selectivity of cyclopeab masking for the spatial frequency of binocular disparity modulation 34: 607
On the role of *X* and simple cells in human contrast processing 34: 659
Spatial-frequency-tuned channels in early infancy: VEP evidence 34: 737
Spatial-frequency specific contrast gain and flicker masking of human transient VEP 34: 863
The role of delineation and spatial frequency in the perception of the colours of the spectrum 34: 927
The spatial properties of binocular suppression zone 34: 937
The scale bandwidth of visual search 34: 955
Estimation of linear detection mechanisms for stimuli of medium spatial frequency 34: 1267
Spatiotemporal transfer function of human accommodation 34: 1965
Spatial frequency tuning of the monkey pattern ERG depends on D2 receptor-linked action of dopamine 34: 2051
Evidence for separate, task dependent noise processes in orientation and size perception 34: 2059
Speed, spatial-frequency, and temporal-frequency comparisons in luminance and colour gratings 34: 2093
Centrifugal inputs enhance responses of retinal ganglion cells in the Japanese quail without changing their spatial coding properties 34: 2189
Analysis of stereothresholds for stimuli below 2.5c/deg 34: 2317
Localization of element clusters by the human visual system 34: 2439
Stimulus discriminability in visual search 34: 2453
Spatiotemporal separability in contrast sensitivity 34: 2569
Perception of apparent motion between dissimilar gratings: spatio-temporal properties 34: 2741
Short-term changes in the response characteristics of the human visual evoked potential 34: 2823
Temporal beats in the human visual system 34: 2833

SPATIAL VISION (*see also* PHASE SENSITIVITY)
The architecture of perceptual spatial interactions 34: 73
Perceiving textures: beyond filtering 34: 151
Spatial integration in human vision with bichromatically-mixed adaptation field 34: 303
Spatial phase discrimination in monkeys with experimental strabismus 34: 437
Scotopic center surround organization in 10-week-old infants 34: 621
The coding of spatial position by the human visual system: effects of spatial scale and retinal eccentricity 34: 625
On the role of *X* and simple cells in human contrast processing 34: 659
Motion displacement thresholds for compound stimuli predicted by the displacement of centroids 34: 747
Illusory brightness step in the Chevreul illusion 34: 1567
Shape discrimination for rectangles defined by disparity alone, by disparity plus luminance and by disparity plus motion 34: 2277

Spatial vision in the honeybee: the use of different cues in different tasks 34: 2363
Localization of element clusters by the human visual system 34: 2439
Interactions between modulated luminance patterns and random-dot patterns 34: 2561
Amblyopic and peripheral vernier acuity: a test-pedestal approach 34: 3265
Discrimination of position and contrast in amblyopic and peripheral vision 34: 3293

SPECTRAL SENSITIVITY
APB alters photopic spectral sensitivity of the goldfish retina 34: 1
The intrarhabdomal filters in the retinas of mantis shrimps 34: 279
An analysis of two spectral properties of vertebrate visual pigments 34: 1359
The developmental trajectory of ultraviolet photosensitivity in rainbow trout is altered by thyroxine 34: 1397
Ultraviolet sensitivity in the torus semicircularis of juvenile rainbow trout *(Oncorhynchus mykiss)* 34: 1407
Ultraviolet vision in a passeriform bird: from receptor spectral sensitivity to overall spectral sensitivity in *Leiothrix lutea* 34: 1415
The photopic sensitivity of the yellow field of the pigeon's retina to ultraviolet light 34: 1419
Sensitivity to ultraviolet light in the gerbil *(Meriones unguiculatus):* characteristics and mechanisms 34: 1433
Ultraviolet photoreception in mantis shrimp 34: 1443
The relation between celestial colour gradients and the position of the sun, with regard to the sun compass 34: 1461
Specialization of retinal function in the compound eyes of mantis shrimps 34: 2639
Spectral sensitivity of dichromats: role of postreceptoral processes 34: 2983

SPEED (*see* MOTION PERCEPTION (SPEED SENSITIVITY))

STABILIZED VISION
Adaptation with a stabilized retinal image: effect of luminance and contrast 34: 2907

STEREOPSIS
Spatio-temporal interpolation in depth 34: 343
The effect of stimulus contrast and interocular correlation on disparity vergence 34: 383
Binocular mechanisms for detecting motion-in-depth 34: 483
Stereopsis and positional acuity under dark adaptation 34: 799
Some temporal aspects of stereoacuity 34: 913
Stereo matching precedes dichoptic masking 34: 1047
Properties of the stereoscopic (cyclopean) motion aftereffect 34: 1139
Seeing depth in colour: more than just what meets the eyes 34: 1165
A polar coordinate system for describing binocular disparity 34: 1205
Disparity averaging across spatial scales 34: 1315
Interocularly unpaired zones escape local binocular matching 34: 1875
Perceived surface shape not features determines correspondence strength in apparent motion 34: 2125
Integration of stereopsis and motion shape cues 34: 2259
Shape discrimination for rectangles defined by disparity alone, by disparity plus luminance and by disparity plus motion 34: 2277
Analysis of stereothresholds for stimuli below 2.5c/deg 34: 2317
Influence of surface attitude and curvature scaling on discrimination of binocularly presented curved surfaces 34: 2409
Linear and non-linear filtering in stereopsis 34: 2431
Relative shear disparities and the perception of surface inclination 34: 2505
An upper limit to the binocular combination of stimuli 34: 2599
Constraints on human stereo dot matching 34: 2761
Objective evaluation of human and computational stereoscopic visual systems 34: 2773

Occlusion, transparency, and stereopsis: a new explanation for stereo capture 34: 2891
Contrast thresholds for stereoscopic depth identification with isoluminant and isochromatic stimuli 34: 2971
Independent encoding of surface orientation and surface curvature 34: 3005

STRABISMUS (*see also* AMBLYOPIA)
Spatial phase discrimination in monkeys with experimental strabismus 34: 437
Pointing errors in strabismics: complex patterns of distorted visuomotor coordination 34: 689
Suprathreshold contrast sensitivity in experimentally strabismic monkeys 34: 1575
Visual loss during interocular suppression in normal and strabismic subjects 34: 2043

SUMMATION, BINOCULAR
Binocular summation in orientation discrimination depends on stimulus contrast and duration 34: 19
Grating and flicker sensitivity in the near and far periphery: naso-temporal asymmetries and binocular summation 34: 2841

SUMMATION, PROBABILITY
The analysis of motion of two-dimensional patterns: do Fourier components provide the first stage? 34: 59
Spatial summation and its interaction with the temporal integration mechanism in human motion perception 34: 3171

SUMMATION, SPATIAL
Perceived contrast of gratings and plaids: non-linear summation across oriented filters 34: 1061
Spatial summation among coextensive and parallel line segments across wide separations (50°): egocentric localization and the Great Circle Model 34: 2577
Spatial integration in position acuity 34: 2859
Spatial summation and its interaction with the temporal integration mechanism in human motion perception 34: 3171

SUMMATION, TEMPORAL
Temporal summation of visual motion 34: 2547
An analysis of the temporal integration mechanism in human motion perception 34: 3153
Spatial summation and its interaction with the temporal integration mechanism in human motion perception 34: 3171

SUPERIOR COLLICULUS (*see* OPTIC TECTUM)

SUPPRESSION (*see also* BINOCULAR RIVALRY)
Active vision in honeybees: task-oriented suppression of an innate behaviour 34: 511
Visual loss during interocular suppression in normal and strabismic subjects 34: 2043

TECHNIQUES
6-Hydroxy dopamine does not affect lens-induced refractive errors but suppresses deprivation myopia 34: 143
Do peripheral non-informative cues induce early facilitation of target detection? 34: 179
The response of macaque ganglion cells and human observers to heterochromatically modulated lights: the effect of stimulus size 34: 217
Effects of optically induced blur on the refractive status of young monkeys 34: 293
The influence of a stationary single line in darkness on the visual perception of eye level 34: 311
Efficient and unbiased modifications of the QUEST threshold method: theory, simulations, experimental evaluation and practical implementation 34: 885

Spectral characteristics of visual pigments in rainbow trout *(Oncorhynchus mykiss)* 34: 1385
Grating induction: a new explanation for stationary phantom gratings 34: 1609
Phosphor persistence in oscilloscopic displays: its luminance and visibility 34: 1619
G. Westheimer responds 34: 1621
On the measurement of phosphor persistence in oscilloscopic displays 34: 1623
Eye fixations near corners: evidence for a centre of gravity calculation based on contrast, rather than luminance or curvature 34: 1625
Systematic measurement of human neonatal color vision 34: 1691
Refractive index of decapsulated bovine lens surfaces measured with a reflectometric sensor 34: 1927
Is global motion really based on spatial integration of local motion signals? 34: 2425
Stimulus discriminability in visual search 34: 2453
Evidence for separate motion-detecting mechanisms for first- and second-order motion in human vision 34: 2727
In vivo determination of the biomechanical properties of the component elements of the accommodation mechanism 34: 2897
Aging of the human crystalline lens and anterior segment 34: 2945
The zones of discontinuity in the human lens: development and distribution with age 34: 2955
Parallel search for a conjunction of contrast polarity and shape 34: 3013
Illusory perception of gratings stimulating a small number of neurones 34: 3253
Amblyopic and peripheral vernier acuity: a test-pedestal approach 34: 3265

TEMPORAL DISCRIMINATION
Temporal integration of random dot apparent motion information in human central vision 34: 461
Responses to pulses and sinusoids in macaque ganglion cells 34: 3081
Temporal properties of the red-green chromatic mechanism 34: 3127

TEMPORAL FREQUENCY
Perceived contrast as a function of adaptation duration 34: 31
Effect of orientation on spatiotemporal contrast sensitivity in multiple sclerosis 34: 123
Antagonistic comparison of temporal frequency filter outputs as a basis for speed perception 34: 253
Spatio-temporal interpolation in depth 34: 343
Speed, spatial-frequency, and temporal-frequency comparisons in luminance and colour gratings 34: 2093
Spatiotemporal separability in contrast sensitivity 34: 2569
Vernier acuity for edges defined by flicker 34: 2717
Short-term changes in the response characteristics of the human visual evoked potential 34: 2823
Temporal beats in the human visual system 34: 2833

TEXTURE PERCEPTION
Perceiving textures: beyond filtering 34: 151
The memorability and discriminability of primitive perceptual units in infancy 34: 449
Dissociation of local and global processing in visual agnosia 34: 963
Set-size effects in visual search: the effect of attention is independent of the stimulus for simple tasks 34: 1703
Recognition and detection of texture-defined letters 34: 2403
Rapid segmentation of one-dimensional noise textures across borders 34: 2689
Independent encoding of surface orientation and surface curvature 34: 3005
Asymmetries in preattentive line detection 34: 3103

THRESHOLD (*see* CONTRAST SENSITIVITY; DETECTION THRESHOLD; INCREMENT THRESHOLD)

TISSUE CULTURE
Growth of rabbit pigmented and nonpigmented ciliary body epithelium 34: 137

TRANSPARENCY
Perceived surface shape not features determines correspondence strength in apparent motion 34: 2125
Full-wave and half-wave rectification in second-order motion perception 34: 2239
Occlusion, transparency, and stereopsis: a new explanation for stereo capture 34: 2891

TRITANOPIA (*see* DICHROMACY)

TROXLER EFFECT (*see* STABILIZED VISION)

ULTRAVIOLET SENSITIVITY
An analysis of two spectral properties of vertebrate visual pigments 34: 1359
Ultraviolet filter compounds in human lenses: 3-hydroxykynurenine glucoside formation 34: 1369
The fate of ultraviolet receptors in the retina of the Atlantic salmon *(Salmo salar)* 34: 1375
Spectral characteristics of visual pigments in rainbow trout *(Oncorhynchus mykiss)* 34: 1385
Ultraviolet visual pigments in marine fishes of the family pomacentridae 34: 1393
The developmental trajectory of ultraviolet photosensitivity in rainbow trout is altered by thyroxine 34: 1397
Ultraviolet sensitivity in the torus semicircularis of juvenile rainbow trout *(Oncorhynchus mykiss)* 34: 1407
Ultraviolet vision in a passeriform bird: from receptor spectral sensitivity to overall spectral sensitivity in *Leiothrix lutea* 34: 1415
The photopic sensitivity of the yellow field of the pigeon's retina to ultraviolet light 34: 1419
A third, ultraviolet-sensitive, visual pigment in the Tokay gecko *(Gekko gekko)* 34: 1427
Sensitivity to ultraviolet light in the gerbil *(Meriones unguiculatus):* characteristics and mechanisms 34: 1433
Ultraviolet photoreception in mantis shrimp 34: 1443
Light transmittance of the human cornea from 320 to 700 nm for different ages 34: 1453
Ultraviolet sensitivity of three cone types in the aphakic observer determined by chromatic adaptation 34: 1457
The relation between celestial colour gradients and the position of the sun, with regard to the sun compass 34: 1461
Ultraviolet vision in birds: what is its function? 34: 1471
Ultraviolet receptors and color vision: evolutionary implications and a dissonance of paradigms 34: 1479
Ultraviolet as a component of flower reflections, and the colour perception of hymenoptera 34: 1489
Wavelength discrimination of the goldfish in the ultraviolet spectral range 34: 1515
Ultraviolet regulation of neuroendocrine and circadian physiology in rodents 34: 1521
Small passerines can discriminate ultraviolet surface colours 34: 1535

VELOCITY (*see* MOTION PERCEPTION (SPEED SENSITIVITY))

VERNIER ACUITY (*see* HYPERACUITY)

VISUAL DIRECTION
The influence of a stationary single line in darkness on the visual perception of eye level 34: 311
Scotopic center surround organization in 10-week-old infants 34: 621
Eye proprioception and visual localization in humans: influence of ocular dominance and visual context 34: 2169
Spatial summation among coextensive and parallel line segments across wide separations (50°): egocentric localization and the Great Circle Model 34: 2577

VISUAL PERSISTENCE (*see also* AFTEREFFECTS)
Simultaneity in the Ternus configuration: psychophysical data and a computer model 34: 397
Cortical dynamics of feature binding and reset: control of visual persistence 34: 1089
Phosphor persistence in oscilloscopic displays: its luminance and visibility 34: 1619
G. Westheimer responds 34: 1621
On the measurement of phosphor persistence in oscilloscopic displays 34: 1623
Effect of the ISI on the visible persistence of a stimulus in apparent motion 34: 2103
On the perception of illusory contours 34: 3145

WAVELENGTH DISCRIMINATION (*see* COLOR DISCRIMINATION)

VISION RESEARCH

INSTRUCTIONS TO AUTHORS

General

Five double-spaced typewritten copies of the manuscript and illustrations are required. The original plus three copies must be submitted to the central office
preferably by airmail:

Vision Research
P.O. Box 12011
1100 AA Amsterdam-Zuidoost
The Netherlands

and one copy to one of the 10 Section Editors whose subject area most closely relates to the work submitted (please indicate to the central office which Section Editor you have selected; every sixth issue of *Vision Research* contains a full description of the scope of each section):

Section 1

YUTAKA FUKUDA, Department of Physiology, Osaka University Medical School, 2-2 Yamadaoka, Suita, 565 Osaka, Japan

SAMUEL M. WU, Cullen Eye Institute, Baylor College of Medicine, Houston, TX 77030, U.S.A.

Section 2

DENNIS M. LEVI, University of Houston, Central Campus, College of Optometry, 4901 Calhoun Boulevard, Houston, TX 77204-6052, U.S.A.

DAVIDA Y. TELLER, Department of Psychology NI-25, University of Washington, Seattle, WA 98195, U.S.A.

Section 3

EILEEN KOWLER, Department of Psychology, Rutgers University, New Brunswick, NJ 08903, U.S.A.

Authors are urged to be as concise as their material will allow, both in text and in illustrations and to take particular care to ensure that the paper is in final form once submitted. Papers of monograph length will not be considered, nor will a series of numbered papers.

All manuscripts should be accompanied by a clear statement that the work has not been published elsewhere and is not under review with another journal, and that if published in *Vision Research* it will not be reprinted elsewhere in any language in the same form without the consent of the publisher, who holds the copyright. Authors should keep copies of all material submitted. Manuscripts will not be returned, and top copies of the artwork will be returned only if this is specifically indicated.

Full papers will be judged by two qualified reviewers; *Letters* and *Short Communications* by only one reviewer to speed up publication. Authors volunteering to prepare *Minireviews* are invited to submit proposals to the appropriate Section Editor including the following information: (1) title, (2) justification for a Minireview at this time on the topic selected, (3) a rough outline and (4) a **firm** date for submission of the completed work, should the Section Editor accept the proposal.

Specific

1. Papers should be written in the English language, accompanied by an abstract. The title page should include up to five key words selected from the key word list published bi-annually in the first and thirteenth issues of *Vision Research*. If a key word which does not appear in this list is needed, it should be underlined. Animal classification should also be given to serve as a guideline for abstracting and indexing. A running head of no more than 40 characters should be provided.
2. The abstract must be no longer than 100 words and should supplement the title informing the reader of the essential points of the paper.
3. The manuscript should be single-sided, double-spaced *typewritten* with generous margins. All material will be discarded **one month** after publication, unless the publisher is requested to return original material to the author.
4. Rejected manuscripts and figures will not be returned to authors, unless specifically required.
5. Authors should return a revised manuscript within 6 months, otherwise it will be treated as a new submission. All material will be discarded after 1 year.
6. *Electronic Manuscripts*

   Authors are encouraged to submit a computer disk (5.25″ or 3.5″ HD/DD disk) containing the *final* version of the paper along with the *final* manuscript to the Editorial office. Please observe the following criteria:

   (a) Send only hard copy when first submitting your paper.
   (b) When your paper has been refereed, revised if necessary and accepted, send a disk containing the final version with the final hard copy. **It is essential that the printed version supplied is produced directly from the electronic version.** In the event of differences between disk and hard copy, the hard copy will be considered to be definitive.
   (c) Specify what software was used, including which release (e.g. WordPerfect 4.0).

(d) Specify what computer was used (either IBM compatible PC or Apple Macintosh).
(e) Include the text file and separate table and illustration files, if available.
(f) The file should follow the general instructions on style/arrangement and, in particular, the reference style of this journal as given in item (10).
(g) The file should be single spaced and should use the wrap-around end-of-line feature (i.e. no returns at the end of each line). Use hard returns (i.e. the enter key) only at the end of paragraphs. Page design will be handled by the publisher. There is no need therefore to use formatting commands such as centring, justifying text, indenting etc. Use the word processor's facilities to indicate the following text attributes: bold, underline, italic, superscript, subscript, strikeout. When using symbols to denote special characters please supply a list of all codes used. Do not use the hyphenation facilities available on the word processor. Authors should not use their own macros. When preparing tables, tabs should be used, not spaces, to align columns.
(h) Authors wishing to submit their articles as a LaTeX/TeX file are recommended to use the "Article" style or LaTeX package which is available via anonymous FTP and CTAN centres on the Internet.

Host names	CTAN directory
ftp.dante.de	/pub/tex/macros/latex209/contrib/elsevier
ftp.tex.ac.uk	/pub/archive/macros/latex209/contrib/elsevier
ftp.shsu.edu	/tex-archive/macros/latex209/contrib/elsevier

Further details on TeX can be obtained from Sebastian Rahtze: *Tel.* 44 1865 843662; *Fax* 44 1865 843905; *Email* s.rahtze@elsevier.co.uk.
(i) Keep a back-up disk for reference and safety.

7. Reprints can be provided at a reasonable cost if ordered when the page proofs are returned. A reprint order form will accompany the proofs. Copies of the particular issue in which the article appears may also be ordered on this form, at a generous discount offer.
8. **Corrections to the proofs must be restricted to printer's errors.** Other than these, any substantial changes will be charged to the author.
9. When human subjects are used, manuscripts must be accompanied by a statement that the experiments were undertaken with the understanding and written consent of each subject. Authors should be aware of the Code of Ethics of the World Medical Association (Declaration of Helsinki), which has been printed in the *British Medical Journal* (18 July 1964). When experimental animals are used, the Methods section must clearly indicate that adequate measures were taken to minimize pain or discomfort. Experiments should be carried out in accordance with the European Communities Council Directive of 24 November 1986 (86/609/EEC) or with the Guidelines laid down by the NIH in the US regarding the care and use of animals for experimental procedures. Editors reserve the right to reject papers if there is doubt whether appropriate procedures have been used.
10. *References*
(a) These should be cited in the text by giving the last name of the author (or authors) followed by the year of publication in parentheses, e.g. Hays (1963), Van den Brink and Bouman (1957) or (Zrenner & Gouras, 1981). If there are three or more authors, citations should read Kuhn, Bennett, Michel-Villaz and Chabre (1981), first citation; Kuhn *et al.* (1981), second citation. If there is more than one work by an author (or authors) in a given year, then they should be labelled alphabetically within each year (e.g. Rushton, 1965a,b).
(b) The full references should be typed on a separate page and placed at the end of the article. They should not be given as footnotes. References should include the names of all the authors and their initials, the year of publication in parentheses, the full title of the article or book, name of the journal, the volume number and the pages. For books, the city of publication and the publisher should be given. The following may serve as illustrations:

Zrenner, E. & Gouras, P. (1981). Characteristics of the blue sensitive cone mechanism in primate retinal ganglion cells. *Vision Research, 21,* 1605–1609.

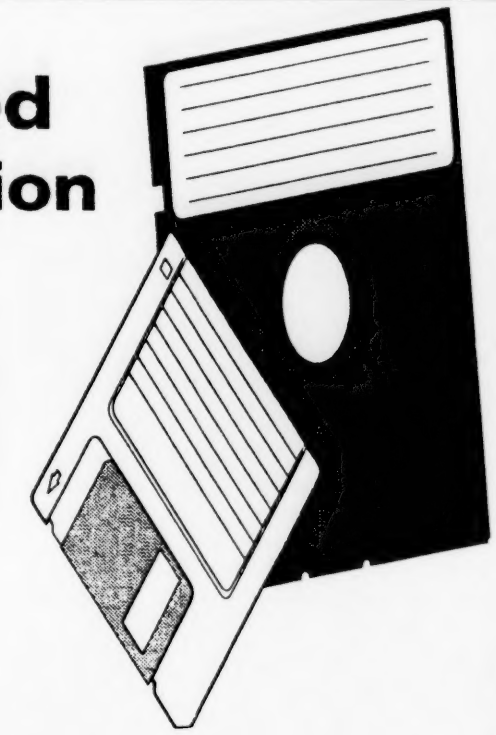
Semmlow, J. L. & Hung, G. K. (1983). The near responses: Theories of control. In Schor, C. M. & Ciuffreda, K. J. (Eds), *Vergence eye movements: Basic and clinical aspects* (pp. 175–195). London: Butterworths.

(c) Unpublished work, work in press, or conference proceedings should be cited only exceptionally, and preprints *must* accompany the paper if they are essential to its argument.
11. *Illustrations and Tables*
(a) Only standard size (*ca* $8\frac{1}{2} \times 12$ in.) should be sent with the paper. They should not be affixed in place, but the proper places for insertion should be indicated in the text. All photographs, graphs and diagrams should be referred to as "Figures" and should be numbered consecutively, as should the tables. The legends should be typed, correspondingly, on a separate sheet at the end of the article. The author's name, the number, and an indication of the proper orientation should be written lightly on the back of each figure or table.
(b) Halftone illustrations (e.g. micrographs) should be glossy prints and should be approximately 1.5 times the final size. In general, it is preferable that any lines or letters that are to appear on the photographs be inserted by the publisher. Their position should be drawn on a leaf of drawing paper firmly attached to the photograph, or on an additional print. Where possible, the author should include a guide to the Production Department which will help them identify the salient features to be reproduced.
(c) Line drawings should be drawn on stiff white paper or tracing cloth, high quality computer graphics are acceptable. They should be approximately twice their final size. The letters and symbols should be drawn so that they will be clearly legible when reduced. The following standard symbols are readily available to the publisher: ○ △ □ ● ▲ ■ + ×. Other special symbols (e.g. Greek Letters) should be made particularly legible and explicit.

TYPESET IN GREAT BRITAIN BY BPC TECHSET LTD, EXETER. PRINTED BY BPC WHEATONS LTD, EXETER

ELSEVIER SCIENCE LTD

Elsevier Science Limited Encourages the Submission of Articles on Disk



Delivery of Electronic Files

Authors may now submit *accepted* manuscripts on 3.5" or 5.25" disks.

Disks must be clearly marked with the following information:

Operating system
Disk format (e.g.DS/DD)
Word Processor used, including version number (users of T_EX see later)
Authors' names
Short title of article

Two printed copies of the final version of the manuscript should be submitted with the disk. In the event of differences between disk and hard-copy, the hard-copy will be considered as the definitive version.

Preparing Electronic Text Files

When using a word processor to prepare a manuscript the following should be noted:

Page design will be handled by the Publisher. There is therefore no need to use formatting commands such as centring, justifying text, indenting etc.
Use the word processor's facilities to indicate the following text attributes: bold; underline; italic; subscript; superscript; strikeout.
Do not use the hyphenation facilities of your word processor.
When preparing tables use tabs, not spaces, to align columns.
When using symbols to denote special characters please supply a list of all codes used.

Use "hard returns" (i.e. using the enter key) only at the end of paragraphs. Use your word processor's "word-wrap" feature within paragraphs.
It is essential that the printed versions supplied are produced directly from the submitted electronic version.

$LaTeX$ / TeX

Authors wishing to submit their article as a $LaTeX$ / TeX file should note the following: (Further details on TeX can be obtained from Martin Key)

Authors should use the "Article" style or the Elsevier $LaTeX$ package which is available via anonymous FTP from CTAN centres.

Authors should not add their own macros.

Preparing Electronic Graphic Files

Illustrations ideally should be produced in the Macintosh environment using the following software packages:
(Please do not save images as postscript files)

Adobe Illustrator
Aldus Freehand
Cricket Graph
Macdraw
Chemdraw
Corel Draw-for PC

However we will accept any of the popular drawing programs for the Macintosh and PC.
Artwork should be drawn for finished size using a Times or Helvetica typeface at a final size of 8pt type with appropriate lineweights.
Please indicate format, operating system, program and version number of the software used. If possible also print a directory of filenames.
Scanned artwork should be saved to Tiff format for both line and half-tone and scanned at a suggested setting of 400 dpi for half-tones and 1000 dpi for linework. If it is necessary to compress the scans please indicate the software used. It is essential that a hard copy print of the scans be included.
Illustrations should be logically named and saved as individual files to 3.5" disk or a SyQuest cartridge 44mB or 88mB. If 3.5" disks are not available to you, 5.25" disks are acceptable. Please send a laser print of the artwork with the electronic file.
When submitting electronic colour images please indicate the file format and program used (including compression software). Include a 4 colour machine or cromalin proof and check that all the separations (if provided) are colour identified.
